

1 **KRILL OIL VERSUS PLACEBO IN THE TREATMENT OF KNEE**
2 **OSTEOARTHRITIS (KARAOKE): A RANDOMISED CONTROLLED**
3 **TRIAL**

4 **Statistical analysis plan**

- 5 Linear regression will be used to compare changes in pain, maximal effusion size
6 and function in univariate and multivariable modelling (if groups are not well matched
7 at baseline) between groups using intention to treat analysis for all outcomes.
- 8 Per protocol analyses will be completed for study participants consuming $\geq 80\%$ of
9 capsules.
- 10 Significance will be $p < 0.05$ (two tailed).
- 11 Missing data will be accounted for by using propensity weighting, as appropriate.
