

Data Sharing Statement

Data

Data available: Yes

Data types: Deidentified participant data

How to access data: The study data will be de-identified appropriately according to the HIPAA regulations or the specifications of the National Institutes of Health. The de-identified study will be shared following the NIH data sharing policy. Collaboration requests should be submitted to the consortium and will be reviewed by the consortium publication committee. The data will be provided following the approval of the proposal and the completion of the data use agreement.

When available: With publication

Supporting Documents

Document types: None

Additional Information

Who can access the data: Researchers whose proposed use of the data has been approved

Types of analyses: For a specified purpose

Mechanisms of data availability: After approval of a proposal
